

# Grapevine

**A Review Website for Internship Programs**

Elisabetta Gabriele and Drew Meseck

# Introduction: Problem

- Problem:
  - Job websites contain only vague and nebulous information about internship programs, and rarely have any kind of reviews - we wanted to fill this gap in information
  - Internships are crucial to career development for students
  - There is no external pressure on companies to actually improve their internship programs

# Introduction: Motivation

Ultimately, we had 2 different motivations for this project specifically

## 1. Technology Motivation

- a. Elisabetta wanted to create a web-application that was useful and had potential beyond this course
- b. Drew wanted to apply data science and machine learning techniques in a practical setting

## 2. Helping Interns

- a. As students ourselves, we know the struggle
- b. Finding information about companies and programs is difficult
- c. We want to remove the “leap of faith” students currently have to take to some degree

# Project Development: Design/User Flow
